User

Cool, so it's like taking numbers and making them actually useful. What Excel tricks should I know?

04:10 PM

Agent

Key Excel functions include VLOOKUP for data retrieval, SUMIF/COUNTIF for conditional calculations, and pivot tables for summarizing large datasets. Let me demonstrate how pivot tables can transform sales data into regional performance insights.

Now let's explore SQL fundamentals. SQL allows you to query databases to extract specific information. The basic syntax follows this pattern: `SELECT columns FROM table WHERE conditions GROUP BY`
